Molecular BioProducts® Introduces An Innovative 10µl Tip Designed Specifically For Beckman Biomek FX and Multimek AP96 Workstations

San Diego, CA – January 2003, Molecular BioProducts, Inc., the leading manufacturer of pipet tips for automated workstations introduces its newest tip - A True 10µl tip for Beckman Biomek FX and Multimek AP96 workstations. **This is the first and only Beckman 10µl tip in a 96-well format available on the market today.** These new Beckman 10µl tips are readily available through Molecular BioProduct's worldwide distribution network.

MBP's new Beckman 10µl tip in a 96-well format is the first and only true small volume tip available for these workstations and will provide you with lowest possible %CV's (coefficient of variance) when pipetting smaller volumes. The smaller the tip, the less dead air there will be to interfere with %CV's. Currently, all 20µl Beckman tips on the market are designed to hold up to 80µl of reagent without a filter and therefore cannot provide the degree of accuracy demanded by researchers pipetting less than 10µl. **Thus, this true 10µl tip will have less dead air volume and provide more accurate pipetting.**

These Beckman 10µl tips for the Biomek FX and Multimek AP96 workstations will be available in sterile, non-sterile, or with our patented **ART®** self-sealing barrier (filter). MBP's new tips, as with all of **MBP's BioRobotix™** brand products, are quality control tested on the workstations for which they were created in our QC lab, both during production as well as before final lot release.

Molecular BioProducts (**MBP®**) is the leading manufacturer in superior quality disposable lab supplies to the life science industry and has been serving molecular biologists in the biotech, academic and pharmaceutical workplace around the globe for over a decade. Our extensive product line consists of the **ART®** (Aerosol Resistant Tip), MBP Pipet Tips, PCR accessories and our broad line of **BioRobotix™** brand tips for automated workstations. MBP's focus is to provide value added solutions and quality products for the life science researcher's liquid handling needs.
