## **NEW FOR RAININ LTS PIPETTERS**

San Diego, CA - June 17, 2003, Molecular BioProducts introduces an innovative low retention technology in its pipet tips for LTS (Light Touch System) pipettors manufactured by Rainin.

These low retention pipet tips are only manufactured by Molecular BioProducts and allow researchers to dispense a variety of viscous samples, loading dyes and surfactants with a degree of accuracy never before possible. These tips which are totally inert, will decrease the amount of reagent loss in the laboratory while significantly increasing the levels of reproducibility from experiment to experiment.

Available with the patented ART barrier, these tips are racked in highly reinforced tip trays to provide a level, non-rocking platform for your multi-channel pipetting needs and will provide 100% protection against carry-over contamination common in PCR based assays.

For more information or to request a free sample log onto MBP's website at [www.mbpinc.com](http://www.mbpinc.com) or call us at 858-453-7551.
